DETAILED ACTION

Election/Restrictions

1. Applicant's election of the species shown in Figs. 1-10 in the reply filed on 3 June 2004 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claim 19 is withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
4. Claims 1-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1 lines 5, 7-9 the terms "signals", "signal", "first signal" and "second signal" are recited. It is unclear if each of these are referring to the same or different signals.

In claim 3 it is recited that the transmission is shifted when "the time interval between successive first and second signals is greater than the first downshift threshold value." This does not make sense since time interval is a length of time (i.e. seconds) and the threshold value is a

speed (i.e. rpm). Claims 9 and 12 have the same problem.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1-3, 7-8, 10-11, 17, and 20-22 (as understood) are rejected under 35 U.S.C. 102(b) as being anticipated by Ethington.

Ethington discloses a shift control apparatus for a bicycle transmission comprising: a magnetic signal detector 82 that detects pulse signals corresponding to motion of the bicycle, a threshold setting unit 70 that sets a shift threshold value; a time interval calculating unit that calculates time intervals after the signals are detected (see col. 22 lines 21-25, Appendix F), and a control unit that provides a second signal to change a gear in the bicycle transmission only after a time interval between successive first and second signals passes the shift threshold value and the second signal is detected by the signal detector, wherein the threshold setting unit sets a first downshift threshold value, and wherein the control unit provides a signal to downshift the bicycle transmission only after a time interval between successive first and second signals passes the first downshift threshold value and the second signal is detected by the signal detector (see col. 22 lines 54).

Allowable Subject Matter

7. Claims 4-6, 13-16, and 18 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited references disclose bicycle automatic transmission systems.
